

A close-up photograph of a vibrant green leaf, showing its intricate vein structure. Numerous small, clear water droplets are scattered across the leaf's surface, reflecting light. The leaf's veins are a darker shade of green, creating a complex pattern. The overall image has a fresh, natural feel.

The Climate Crisis and Rising Threats to International Security

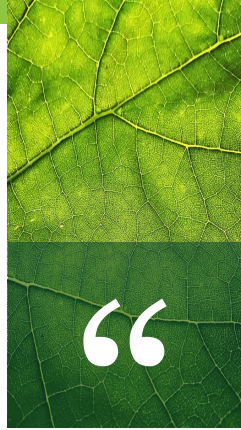

Marlea Maltz

maltzm1@tcnj.edu

1. Introduction

The climate crisis has many different effects including, the warming of the ocean, melting ice sheets and glaciers, extreme weather events, ocean acidification, and global sea levels rising.

Research

Question

What further implications do rising sea levels and its consequences have for the global community?

Thesis

As global sea levels rise, more global citizens will be seeking refuge, which will cause international security threats around the world. This can include resource shortages and scarcity, prejudice against migrants, and violence.

3. Literature Review

Existing Literature

- ❖ Anthropogenic climate change
- ❖ Making links
- ❖ “Societal Security” (Tallmeister 2013)

4. Research Design, Methodology and Case Studies

Case Studies

Caribbean Islands and the United States

Pacific Islands and Australia

5. Evaluation

6. Conclusion

- ❖ **Revision**
- ❖ **Collaboration**
- ❖ **Implementation**
